Introduction

Visitors are integral to New York's economy, generating significant financial benefits for residents and local businesses. Visitor activity also produces substantial tax revenue which supports government services.

Credible measurements of the visitor economy are designed to inform policy decisions that foster the sector's development.

To quantify the significance of New York's visitor economy, Tourism Economics developed a comprehensive analysis of visitor spending and its total economic impact on businesses, employment, personal income, and taxes. At a high level, our approach includes the following stages:

- Compilation of visitor statistics
- Compilation of industry data
- Compilation of government data
- Analysis of visitor spending by category
- Economic impact modeling

Methodology

Methodology Overview

Measuring the visitor economy begins with a comprehensive demand side analysis. A visitor is defined as someone who stayed overnight or traveled more than 50 miles to the destination.

The study area is defined as the state of New York.

Visitor survey data provide estimates on the volume of visitors by type and their spending in specific categories (e.g. lodging, restaurants, retail, recreation and entertainment, transportation). These estimates are strengthened through an analysis of industry-specific data sets on the lodging industry, aviation, and sectoral-level business sales. Government data, including taxes by type as well as employment and personal income by industry are used to supplement and confirm demand-side visitor spending calculations.

The primary source of the employment and wage data is the Regional Economic Information System (REIS), maintained by the Bureau of Economic Analysis (BEA). This is more comprehensive than Bureau of Labor Statistics (BLS QCEW) data because sole-proprietors do not require unemployment insurance and are not counted in the QCEW data.

The complete set of data inputs is provided below.

Data Sources

- **Longwoods International:** Consumer survey data, including spending and visitor profile characteristics
- **STR/CoStar:** Lodging performance data, including room demand and revenue, for hotels
- **NYS Government:** Taxable sales and purchases by category
- **NYS Comptroller:** Lodging tax collections
- **BEA/BLS**: Employment and wage data, by industry
- **US Census:** Business sales and employment by industry, and seasonal second homes inventory
- **Tourism Economics:** International arrivals data for visitors to New York

TOURISM ECONOMICS

KEY FINDINGS

Key Findings

Visitors Generate Significant Economic Impact

In 2025, **321.2 million visitors spent $97.6 billion** in the New York economy, increases of 1.1% and 3.9%, respectively. Visitor spending generated a total economic impact of **$152.7 billion.**

321.2M VISITORS TO NEW YORK

$97.6B VISITOR SPENDING

$152.7B TOTAL ECONOMIC IMPACT

$48.8B TOTAL PERSONAL INCOME

$11.9B STATE AND LOCAL TAXES

Results in Context

The visitor economy is an economic pillar in New York. In 2025, visitor spending supported the following:

$97.6B VISITOR SPENDING

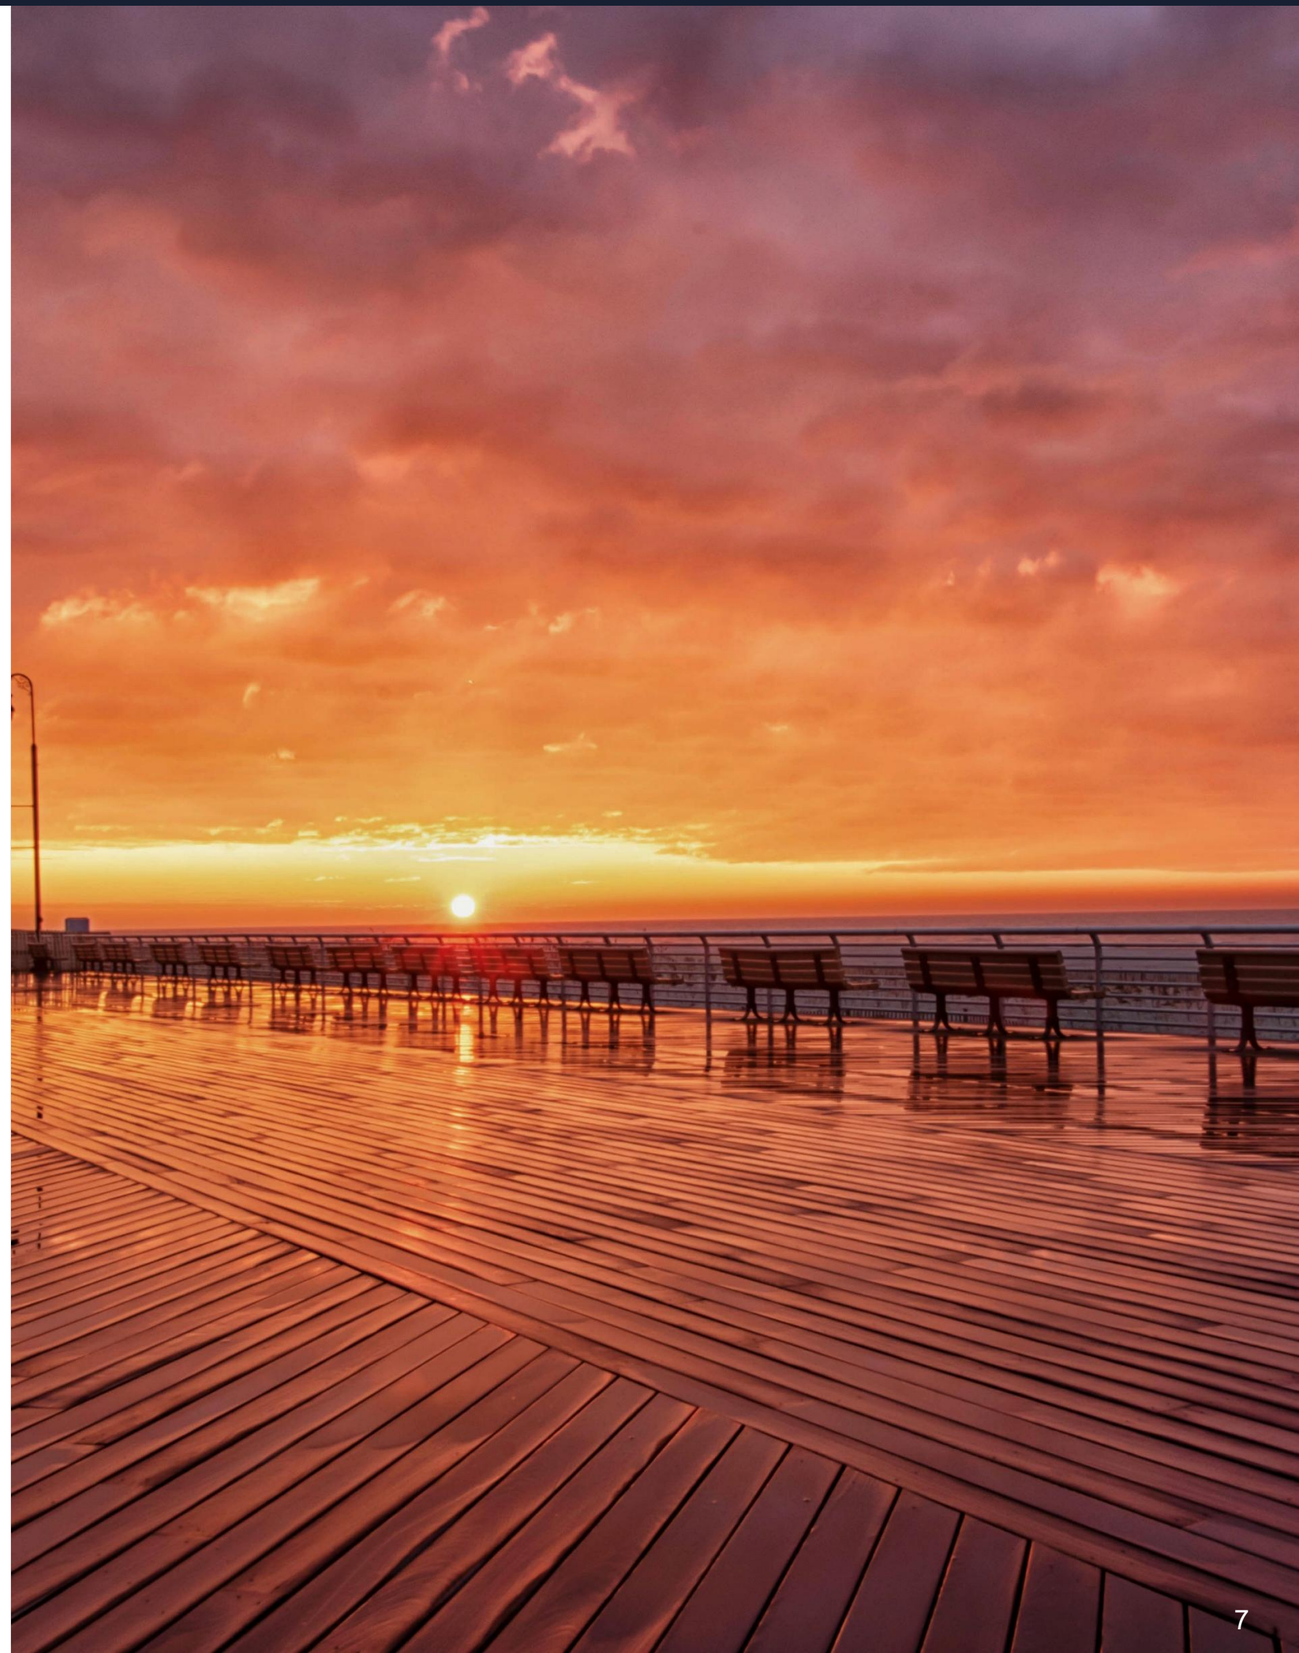
Visitors spent $267.4 million per day in New York, on average.

$48.8B PERSONAL INCOME

This is the equivalent of $6,320 per resident household, regardless of any connection to the visitor economy.

$11.9B STATE & LOCAL TAXES

Each household in New York would need to be taxed an additional $1,540 to replace the visitor-generated taxes received by New York state and local governments in 2025.



TOURISM ECONOMICS

VISITOR VOLUME & SPENDING

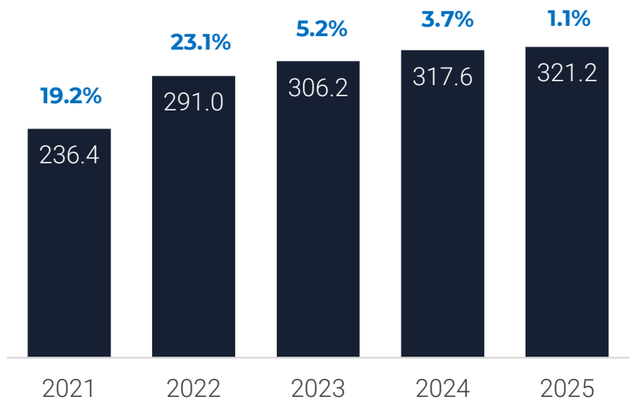
New York welcomed **321.2 million** visitors who spent **$97.6 billion** in 2025.

Visitor Volume

In 2025, 321.2 million visitors traveled to New York, a moderate increase over the prior year (+1.1%). Growth was driven solely by the domestic market, as international arrivals fell 6.3%, a result of a sharp decline in Canadian visitors.

New York Visitor Volume

millions



Source: Tourism Economics

Visitor Spending

Visitor spending increased 3.9% to $97.6 billion in 2025.

Of the $97.6 billion spent, lodging, including hotels, short-term rentals, and the value of second homes, accounted for $33.6 billion—just over 34% of all visitor spending.

Visitors spent 26% of their budget on food and beverage purchases.

New York Visitor Spending

$ billions

Note: Lodging includes all accommodation types, and transportation includes both ground and air transportation.

Visitor Volume and Spending Trends

Visitor spending increased 3.9% in 2025, driven primarily by domestic demand and the impact of higher prices.

Lodging led all spending categories in 2025 for the second consecutive year, increasing 5.7% year-over-year. Recreation & entertainment (+4.5%) and food & beverages (+4.4%) also posted solid gains, while slight declines in air transportation and gasoline spending tempered overall growth.

Spending by Canadian visitors declined 28% from the prior year, leaving it about 14% below pre-pandemic levels.

TOURISM ECONOMICS

ECONOMIC IMPACT METHODOLOGY

Economic Impact Methodology

The development of visitor economy impact modeling begins with a comprehensive demand side analysis. Visitor survey data provides estimates on the volume of visitors by type and their spending in specific industries (e.g. lodging, restaurants, retail, recreation and entertainment, transportation). These estimates are strengthened through an analysis of industry-specific data sets on the lodging industry, aviation, and sectoral-level business sales. Government data, including taxes by type, as well as employment and personal income by industry, are used to supplement and confirm demand-side visitor spending calculations.

This provides a detailed profile of visitor spending by industry, which is then connected to a local input-output (I-O) economic impact model constructed within the IMPLAN platform. This uses government (Bureau of Economic Analysis and Census) data to trace the flow of visitors through the local economy and its effects on businesses, households, and government. The model quantifies three levels of impact:

1. **Direct impacts:** Visitor spending creates direct economic value within a defined set of sectors. This supports a proportion of spending, jobs, wages, and taxes within each sector.
2. **Indirect impacts:** Businesses providing direct services to visitors purchase goods and services, generating additional impacts called indirect impacts or supply-chain effects.
3. **Induced impacts:** Additional business activity is generated as employees spend incomes locally that are earned due to visitor activity. This is called the induced impact or income effect.

The model calculates these three levels of impact—direct, indirect, and induced—for the following metrics:

- Spending
- Wages
- Employment
- Federal Taxes
- State Taxes
- Local Taxes

Economic Impact Model

TOURISM ECONOMICS

ECONOMIC IMPACT

Business Sales Impacts

Visitors spent $97.6 billion in New York in 2025. These direct impacts generated an additional $55.1 billion through supply chain (indirect) and income (induced) effects.

As a result, the total economic impact of visitors reached $152.7 billion in 2025, 5.1% ahead of the prior year.

Tax Impacts

Visitor activity generated $24.5 billion in government revenues in 2025.

State and local taxes alone reached $11.9 billion in 2025, with state taxes increasing 5.5% over the prior year.

Local visitor-supported taxes, sustained mainly through property taxes, neared $6.7 billion in 2025.

Each household in New York would need to be taxed an additional $1,540 to replace the visitor-generated taxes received by state and local governments in 2025.

REGIONAL SUMMARY

New York State is divided into **11 vacation regions**.

Visitor Spending By Region

In 2025, most regions displayed gains relative to the prior year; however, weaker Canadian visitation was impactful for border regions. Overall, statewide visitor spending growth moderated to 3.9%.

The New York City tourism region remains the largest by visitor spending at 63% of the state total, having witnessed modest year-over-year gains (+4.0%) in 2025.

RETAIL	*Includes visitor spending in all retail sub-sectors within the local economy, excluding grocery stores.*
LOCAL TRANSPORT	*Ride share, taxis, limos, trains, rental cars, buses, and gasoline purchases.*
AIR TRANSPORT	*Where applicable, the local share of air transportation spending.*
SECOND HOMES	*Where applicable, spending associated with seasonal second homes for recreational use as defined by the Census Bureau.*

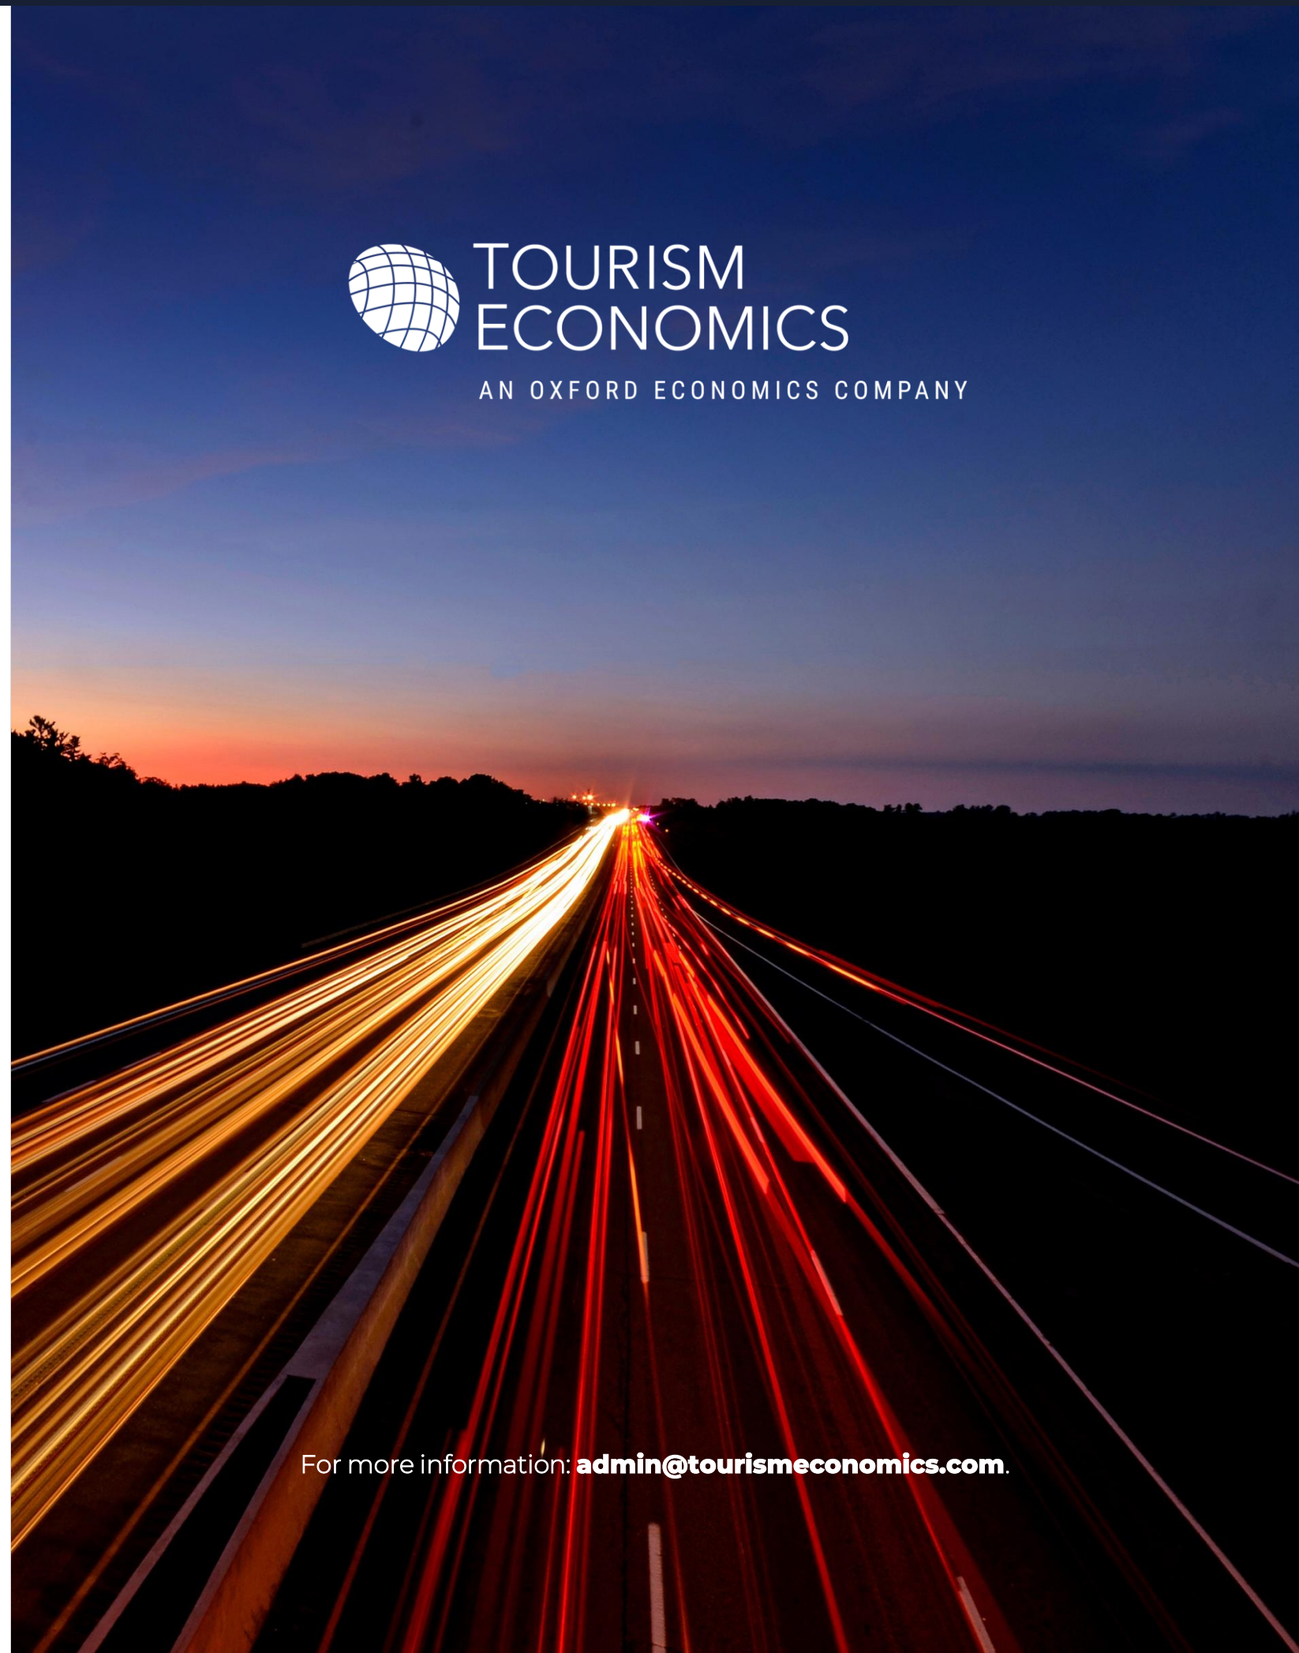
ECONOMIC IMPACT DEFINITIONS

DIRECT IMPACT	*Impacts (business sales, jobs, income, and taxes) related to businesses where visitors spend dollars (e.g. recreation, transportation, lodging).*
INDIRECT IMPACT	*Impacts created from the purchase of goods and services as inputs (e.g. food wholesalers, utilities, business services) into production by the directly affected sectors (i.e. business-to-business purchases).*
INDUCED IMPACT	*Impacts created from spending in the local economy by employees whose wages are generated either directly or indirectly by visitor activity.*
EMPLOYMENT	*Employment is measured by the Bureau of Economic Analysis (BEA) definition, and captures full-time and part-time jobs, which includes salary and wage employees and proprietors.*
PERSONAL INCOME	*Income (wages, salaries, proprietor income and benefits) supported by visitor spending.*
LOCAL TAXES	*City and County taxes generated by visitor spending. Includes any local sales, income, bed, usage fees, licenses and other revenue streams to local governmental authorities.*
STATE TAXES	*State tax revenues generated by visitor spending. Includes sales, income, corporate, usage fees and other assessments of state governments.*

About the Research Team

This study was conducted by the Tourism Economics group within Oxford Economics. Tourism Economics combines an understanding of traveler dynamics with rigorous economics to answer the most important questions facing destinations, investors, and strategic planners. By combining quantitative methods with industry knowledge, Tourism Economics designs custom market strategies, destination recovery plans, forecasting models, policy analysis, and economic impact studies.

Oxford Economics was founded in 1981 as a commercial venture with Oxford University's business college to provide economic forecasting and modeling to UK companies and financial institutions expanding abroad. Since then, we have become one of the world's foremost independent global advisory firms, providing reports, forecasts and analytical tools on 200 countries, 100 industrial sectors and over 3,000 cities. Our best-of-class global economic and industry models and analytical tools give us an unparalleled ability to forecast external market trends and assess their economic, social and business impact.

Oxford Economics is an adviser to corporate, financial and government decision-makers and thought leaders. Our worldwide client base comprises over 2,000 international organizations, including leading multinational companies and financial institutions; key government bodies and trade associations; and top universities, consultancies, and think tanks.


Oxford Economics employs more than 600 full-time staff, including 350+ professional economists and analysts. Headquartered in Oxford, England, with regional centers in London, New York, and Singapore, Oxford Economics has offices across the globe in Belfast, Chicago, Dubai, Miami, Milan, Paris, Philadelphia, San Francisco, and Washington DC.
